eScan Total Security Suite for Business - v22

Advanced Protection against
Ransomware Threats

Why eScan Total Security Suite for Business?

Endpoint Protection

- Mail Antivirus

This will allow you to analyze all the incoming mails. This analyses the mails by breaking it into three sections the header, subject and the body.

- Anti-Spam

This will prevent you from receiving spam mails by checking the content of outgoing and incoming mails, quarantines advertisement mails.

Digital Defence

- Outbreak Prevention

Outbreak Prevention will allow the administrator to deploy outbreak prevention policies during an outbreak that restricts access to network resources from selected computer groups for a defined period of time. The outbreak prevention policies will be enforced on all the selected computers or groups. Incorrect configuration of these policy settings can cause major problems with the computers.

- Privacy Control

This will allow you to schedule an auto erase of your cache, ActiveX, cookies, plugins, and history. You can also secure delete your files and folders where no traces of deletion could be found.

Uniform Management

- New Secure Web Interface with Summarized Dashboard

The new Secure Web Interface uses SSL technology to encrypt all communications. eScan's summarized dashboard provides administrators the status of the managed endpoints in graphical format such as deployment status, protection status, as well as protection statistics.

- Asset Management

eScan's Asset Management module provides the entire hardware configuration and list of software installed on endpoints. This helps administrators to keep track of all the hardware as well as software resources installed on all the endpoints connected to the network.

eScan Total Security Suite for Business - v22

Advanced Protection against
Ransomware Threats

Key Features (eScan Server, Windows):

Outbreak Prevention

This feature will allow the administrator to deploy outbreak prevention policies during an outbreak that restricts access to network resources from selected computer groups for a defined period of time. The outbreak prevention policies will be enforced on all the selected endpoints or groups. Incorrect configuration of these policy settings can cause major problems with the computers

Client Live Updater

With the help of eScan's Client Live Updater, events related to eScan & security status of all endpoints are captured and recorded / logged and can be monitored in real-time. Also, the events can be filtered to retrieve exact required information to closely monitor security level on all managed endpoints on a real-time basis, thus ensuring total security on all managed endpoints. It also facilitates export of the reports in Excel format that can further be used for audit compliance.

Session Activity Report

eScan Management Console monitors & logs the session activity of the managed computers. It will display a report of the endpoint start up/shutdown/log on/log off/remote session connects/disconnects. With this report the administrator can trace the user Logon & Logoff activity along with remote sessions that took place on all managed computers.

One-Time Password

Using One-Time Password option, the administrator can enable or disable any eScan module on any Windows endpoint for a desired period of time. This helps to assign privileges to certain users without violating a security policy deployed in a network.

Print Activity

eScan comprises of Print Activity module that efficiently monitors and logs printing tasks done by all the managed endpoints. It also provides a detailed report in PDF, Excel or HTML formats of all printing jobs done by managed endpoints through any printer connected to any computer locally or to the network.

eScan Total Security Suite for Business - v22

Advanced Protection against
Ransomware Threats

Key Features (eScan Server, Windows):

Endpoint Security (with Device Control & Application Control)

This module protects your computer or endpoints from data thefts and security threats through USB or FireWire® based portable devices. It comes with an Application control feature, which helps you block unwanted applications from running on your computer. In addition, this feature provides you with a comprehensive reporting feature that helps you determine which applications and portable devices are allowed or blocked by eScan.

PBAE

Proactive Behavioral Analysis Engine provides real time protection for organizations and users against Ransomware attacks. It monitors the activity of all processes and blocks the one whose behaviour matches to a Ransomware.

Data Leak Prevention

eScan empowers enterprises to minimize the risk of data theft with its advanced features like Attachment Control and Device Control. Through Attachment control the admin can block/allow all attachments the user tries to send through specific processes as well as trusted websites that you define.

Update Agent

In a large organization the Administrator can create computer groups for better management and distribution of Policies and Updates. Using eScan they can install Update agent on any managed endpoint (where eScan Client is already installed). This update Agent will take the signature updates and policies from eScan Total Security Server and distribute the same to other managed computers in the group. The Update agent will alternatively query eScan Update servers on internet for getting updates whenever there is a connectivity problem between the update agent and eScan Total Security Server.

TSPM

Terminal Services Protection Module by eScan not just detects the brute force attempts but also heuristically identifies suspicious IP Addresses / Hosts. It blocks any attempts to access the system.

Policy Criteria

The administrator can specify policy criteria and deploy it to endpoints automatically if it complies with the pre – defined criteria in the management console. The Administrator will select Policy Criteria based on which the policies will be deployed.

Key Features (eScan Endpoint)

Mail Anti-Virus

This allows you to analyze all the incoming mails. This analyses the mails by breaking it into three sections the header, subject and the body.

Privacy Control

This allows you to schedule an auto erase of your cache, ActiveX, cookies, plugins, and history. You can also securely delete your files and folders where no traces of deletion could be found.

Firewall

This helps you in putting up a restriction to incoming and outgoing traffic and hacking. You can define the IP range, permitted applications, trusted MAC addresses and local IP addresses.

Anti-Spam

This prevents you from receiving spam mails by checking the content of outgoing and incoming mails, quarantines advertisement mails.

File Anti-Virus

This scans all the existing files and folders for any infection. It will allow you to report / disinfect / quarantine / delete objects.

Other Important Features

Active Directory Synchronization

With the help of Active Directory synchronization, the administrator can synchronize eScan Centralized Console groups with Active Directory containers. New computers and containers discovered in Active Directory are copied into eScan Centralized Console automatically and the notification of the same can be sent to the system administrator. Administrator can also choose to Auto Install or Protect discovered Windows workstations automatically.
